

R2 Sorting Process Flow

The requirements for sorting, categorization and processing, which is Core Requirement 6 in the R2v3 standard, has lots of moving parts to it. While you have to account for what you are doing here, you also have to follow many different process flows, depending on what the equipment and materials you are working with are.

When I started to analyze this, I had to write it down in a way I could easily work with.

I thought you might find this helpful also – here is the process flow that is a summary of Core Requirement 6 and the Appendices that need to be followed:
